(iv) Democratic Decentralisation.

□ □ □ □ □ d □ □ □ □ □

Code No. : **A.B.C-399**

- (C) Write a precis of the following passage and give a suitable title : 5

One great defect of our civilization is that it does not know what to do with its knowledge. Science as we have seen, has given us powers fit for the gods, yet we use them like small children.

For example, we do not know how to manage our machines. Machines were made to be man's servants; yet he has grown so dependent on them that they are in a fair way to become his masters. Already most men spend most of their lives looking after and waiting upon machines. And the machines are very stern masters. They must be fed with coal, and given petrol to drink, and oil to wash with, and must be kept at the right temperature. And if they do not get their meals when they expect them, they grow sulky and refuse to work, or burst with rage, and blow up, and spread ruin and destruction all round them. So we have to wait upon them very attentively and do all that we can to keep them in a good temper. Already we find it difficult either to work or play without the machines, and a time may come when they will rule us altogether, just as we rule the animals.

Code No. : **A.B.C-399**

- (xiv) She told us a story.

Add the missing relative :

- (xv) The chair was broken is now mended.

- (xvi) Women work in hospitals are to be admired you their courage.

(B) Read the following passage carefully and answer the questions given below : **5**

The body, firstly, breaks down the food into smaller and smaller pieces using the mouth and

Code No. : **A.C-399**

teeth, the stomach and other parts of the digestive tract—finally, the pieces end up as molecules in the intestines, where they are so small that they can be easily absorbed through the intestinal wall and into the body tissue and give us the energy to do things, like running or walking or even breathing. The waste food that cannot be digested by the body is passed out of the bottom end of the digestive tract. Every machine needs a suitable supply of fuel to give it energy and keep it in good condition. Our body machine also needs the food to keep it in tip-top condition for a life time.

Questions :

- (i) What is the first thing the body does the food ?
- (ii) What, finally, happens to the smaller pieces ?
- (iii) How do we get energy to do things ?
- (iv) What happens to the waste food ?
- (v) Why does our body need food ?
