ABOUT CONFERENCE

Plants are the major component of life on earth. Human life is dependent on plants in various ways. Plants provide us oxygen, food, clothing, shelter, medicines and a variety of raw materials for their utilization in various industrial and domestic purposes. Therefore, humans have always been interested in plants since time immemorial. With the integration of new technologies in research, plant science will continue to become more interdisciplinary and will present a challenge for future generation. Our knowledge about the world around us is incomplete if we do not include plants in our discoveries, and it is distorted if we do not place enough emphasis on plant life.

Therefore, the main objective of this conference is to provide interdisciplinary platform for interaction between industry, academia and research professional and to discuss all the aspects of plant sciences.
